

AgileFlow - Project Management System

Project Idea Description

AgileFlow is a modern web-based project management system designed to help teams efficiently plan, organize, and track their work. The platform is inspired by industry tools like Jira but focuses on simplicity, performance, and user-friendly design. It enables organizations to manage projects using agile methodologies such as Scrum and Kanban. Users can create projects, assign tasks, define priorities, and monitor progress through interactive dashboards. The system also enhances team collaboration through real-time comments, notifications, and file sharing. AgileFlow aims to improve productivity, transparency, and communication within teams of all sizes, including startups and small-to-medium businesses.

Functional Requirements

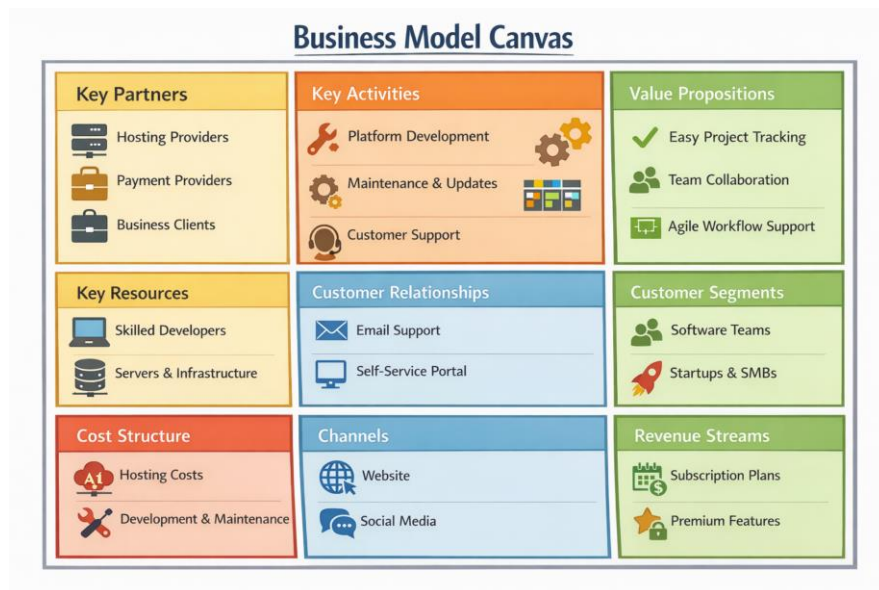

1. User Management: Register, login, manage users, assign roles.
2. Project Management: Create, update, delete projects, assign manager.
3. Task Management: Create tasks, assign users, set priority and deadlines.
4. Team Collaboration: Comments, notifications.
5. File Management: Upload, download, delete files.
6. Reporting & Dashboard: View stats and reports.
7. Search & Filter: Search projects, tasks, users.
8. Authentication & Authorization: JWT, role-based access.

Non-Functional Requirements

9. Performance: Response time ≤ 2 seconds.
10. Scalability: Supports growing users.
11. Security: HTTPS, password hashing.
12. Usability: Easy UI, responsive design.
13. Reliability: High uptime and backups.
14. Maintainability: Clean architecture.
15. Compatibility: Works on major browsers.
16. Availability: 24/7 access.
